TBC Dependent on experience

# Working for OEM

---

**Open Energy Market is an innovative and fast-growing company redefining the commercial energy buying and management space. Providing smart energy services for a net zero era, we combine innovative technology with extensive sector experience to support customers with data-led analytics and live insights that drive informed decision making and effective strategy execution across procurement, carbon reduction and compliance.**

A collaborative and open approach grows from the heart of our business. From our development department to our commercial and trading department, every team member is invested in growing the company. Whether it's bringing innovative new products to market, recognising gaps in data that can benefit the whole industry, or enhancing the UI of our ground-breaking proprietary tech. We are inspired by each others' ideas and work as a team to achieve OEM's goals. We are proud of our work, but never so proud we stand still. When you join OEM, you can expect your opinion to be heard, your skills used, and your experience grown.

Since our launch in 2013 we have built an impressive portfolio of customers and partners, providing a platform for large scale energy buyers to manage their energy and the procurement process. Our customers are some of the largest household names in the UK and a number of those have come through our partner channel.

Our plans are for rapid expansion, we are seeking enthusiastic, intelligent, and creative team members to join us. You can expect to join a dynamic team and see your efforts reflected directly in the success of the business. OEM needs the brightest sparks to continue propelling our smart energy services and fire us towards our ambitious goals.

# Job Description:

## Full Stack C# Developer

---

### The Opportunity

Open Energy Market operates the 'Open Platform', our owned technology platform that is the smartest way to buy, trade, forecast and report on commercial energy consumption. Our platform, combined with the expertise of our energy specialists, saves commercial energy buyers time and money. We make use of the following technologies to do so:

.net 6.0 (Blazor & MVC)  
.net core  
ASP.net MVC  
Vue.js  
Azure/SQL Server  
CSS, HTML and JavaScript

You'll be part of an industry-changing company, helping to redefine the way companies buy and manage their energy. You'll have a stake in the positive changes you make, and as a permanent member of staff you will be offered company share options, a competitive pension, and 25 days annual leave per year.

### The Individual

This individual must be enthusiastic, a self-starter and be able to work without constant direction

OEM operates a structured, disciplined, fully remote development environment (remote tool-sets, applied architectural and style guidelines, etc), we are specifically looking for people who are happy and productive working this way, and ideally will have substantial experience working remotely.

We are looking for people who can understand requirements, question them if necessary, and lift the level of their team through review and contribution.

# Job Description:

## Full Stack C# Developer

---

### The Selection Process

All candidates must have code prepared for an interview, that will be used to showcase their talent, experience, and their exposure to the tech stack OEM makes use of.

Their sample code should illustrate what the candidate thinks is a good architectural approach; in addition to how the code is structured, the code itself should have several examples that highlight their skills and give us a good idea of what they consider good practice.

All candidates will be queried on their decision-making processes and would need to provide justification for the processes they had followed in constructing their solution.

We appreciate that a candidate may not be able to show us something from their work so it can of course be a personal project or something they create specifically for the purpose of an interview. We do not, however, have any interest in looking at boilerplate code.

Prefer UK based or in a compatible time zone, excellent English language skills are required

---

To apply for this position, send your CV and brief cover letter specifying the position you are applying for to  
**jobs@openenergymarket.com**

We look forward to receiving your application – good luck!
